Part 1: Methods in Archaeology

Mediation of archaeological heritage and research valorisation in VR XR.

François Giligny (Professor of Methods and Theories in Archaeology – UP1PS)

Virtual and mixed reality technologies are increasingly being used in archaeological heritage mediation initiatives and to promote research work. While the former is well known, particularly since the rise of virtual museums during and after the COVID-19 pandemic, researchers are less likely to use these technologies, which require adapting the discourse and presentation formats to VR or XR. The session will be organised in several stages: definition and presentation of the potential of VR technologies, overview of applications, case studies with practical examples, presentation of the digital policy of major institutions and discussion with experts. Teachers and doctoral students at EUR are also invited to present their work in this field and show how they can use these technologies.

Monday 19th January

Rooms 303 and 319 (3rd floor of the IAA)

9:15 – Welcome words by Haris Procopiou (Professor of Aegan Prehistory, UP1PS; Dir. of the EUR ArChal).

9:30 – New realities in archaeology: introduction and presentation of immersive technologies (François Giligny).

12:30-14:00 – Lunch break

14:00-17:30 – Practical work on general public applications or websites using VR headsets: exploratory visits, critical analysis using an evaluation grid, assessment of virtual visits.

(François Giligny; Cyrille Galinand – Specialist in imaging and digital technologies, UP1PS; and Tiffany Aires Da Cruz – PhD student, UP1PS).
